

I have been an XM Satellite Radio subscriber since it became available. I have listened to it from coast to coast and border to border. In the early morning hours it has helped me to stay awake by listening to its programming. It would be a step backwards to restrict or limit its programming. I use it in my home. Here where I live I only have three radio stations to listen to. One is a rock station geared to the young and the others are country for the young as well. The satellite Radio gives me a better variety of options to listen to. I hope it is able to retain all of its programs and expand in the future. I am Evelyn Jacks wife and I really enjoy all of the radio stations. My husband and I drove a truck for 3 years and I personally would have used the weather and traffic reports. I am sure that anyone who has XM radio would use it. It is a wonderful idea for all of us. Please continue to bring us the best radio service there is.
